

SE 410 – SOFTWARE FRAMEWORK APPLICATIONS
Spring 2025-2026

E-Learning Platform with Personalized Study Plans
Project Requirements

Group 7

Defne Yılmaz
Hasan Efe Ünal
Can Özer
Ege Yılmaz

Functional Requirements

1. The system should allow admins to create new courses by entering details such as title, description, category, and difficulty level.
2. The system should allow admins to edit or delete existing courses in the course catalog.
3. The system should allow students to browse and view all available courses on the web platform.
4. The system should allow students to enroll in courses they are interested in.
5. The system should allow students to access course modules and mark them as completed.
6. The system should track students' progress for each enrolled course and display the completion percentage.
7. The system should generate personalized study plans based on students' progress and enrolled courses.
8. The system should recommend courses to students using delegates based on their learning preferences or performance.
9. The system should allow admins to view and monitor student progress through the desktop application.
10. The system should allow admins to analyze course-related data such as enrollment numbers and completion rates.

Non-Functional Requirements

1. The system should have a simple and user-friendly interface for both admins and students.
2. The system should securely store all user data, including student progress and course information.
3. The system should respond quickly when loading courses, updating progress, or generating recommendations.
4. The system should keep data consistent between the desktop and web applications.
5. The system should be easy to maintain and extend, allowing new features or recommendation rules to be added easily.
